

5151 Terminal Road Upgrade

December 2017 Community Update

Pedway structure installed successfully as project team continues to make progress.

Thanks to all our neighbours for your patience during the temporary road closure on Lower Water Street while we installed the pedway structure in early November.

Work to install the pedway windows, roof and flooring is ramping up this month and will continue into early 2018. To ensure this work takes place safely, Lower Water Street will be reduced to one-lane, on an alternating basis, in the immediate area of the pedway. Traffic will still be able to flow along Lower Water Street through the open lane.

In the next few weeks we will finish repairing the retaining wall on the north side of the building. The project remains on track to be finished in late 2018.

The 5151 Terminal Road project team is committed to completing this project safely, and we thank you for helping us take care around the construction site.

About the Project

Emera is renovating 5151 Terminal Road into an environmentally sustainable headquarters for our growing team. We are proud to support our local economy by updating an existing building in downtown Halifax. The project includes a public pedway that will give people a safer choice for crossing to the Discovery Centre and other amenities along the harbor.

Did you know?

The new windows at 5151 Terminal Road will have three times the insulating factor of the old windows, adding to the building's energy efficiency and reducing its environmental impact.
